Constituents and additives

Effect on the substrate

Slightly decomposed raised-bog peat (white peat)	increases the air capacity and improves the structural stability
Strongly decomposed raised-bog peat (black peat)	increases the water holding capacity and improves the water uptake
Perlite	provides for a high pore volume and a high air capacity
Pure quartz sand	improves drainage and reduces the risk of water logging
Lime (Calcium carbonate)	adapts perfectly the pH-value to the specific requirements of the plants
Top-Quality compound fertilizer	supplies the plants immediately with all macro and micro-nutrients
Micro-nutrient fertilizer	supplies the plants additionally with: Mg, B, Cu, Mn, Mo, Fe and Zn
Wetting agent Instant plus	improves the water uptake of the substrate, particularly of the dry material
